OBSERVATIONS

The project has minor issues that can be resolved such as the website security. It also carries the resemblance of a standard project that has not renounced ownership in terms of functionality. This is common for a variety reason to allow CA changes however it also allows for the potential for malicious activity.

Below are examples of the common functions allowing the contract owner to exercise right of change and make modifications. This does not mean the reasons are not genuine however caution is advised

```
function setNewRouter(address newRouter) external onlyOwner {
function setLpPair(address pair, bool enabled) external onlyOwner {
function setInitializer(address initializer) external onlyOwner {
function setExcludedFromFees(address account, bool enabled) public onlyOwner {
function setExcludedFromProtection(address account, bool enabled) external onlyOwner {
function setWallets(address payable marketing, address payable development, address payable nftRewards) external onlyOwner {
```
